Connected seat

A Holmbergs DigitalSafety™ child monitoring system

The world's first fully integrated digital safety solution for child car seats, developed for a digital world. Containing the eSaga Connect™ and the white-label app, the Holmbergs DigitalSafety™ solution makes you a truly next level safety provider for your customers.

Tightening reminder
Supports a tighter and safer fit

The eSaga Connect™ reminds and guides the guardian to tighten the harness straps. If tightening is overlooked, the buckle gives a red flashing light and a beeping sound. When tightening is started the reminder turns off and the eSaga Connect™ confirms that tightening has been done with a green solid light.

🔴 Buckled, but too slack

((◎)) Reminder to tighten

◎ Almost there

Unbuckling alert
Alerts the guardian if the child unbuckles

Many parents struggle with children unbuckling themselves during the drive. When the buckle is unbuckled it gives off a 3-beep sound to alert the guardian. It also forwards an alert to connected phones.

Abandon alert
Alerts the guardian if the child is left alone in the car

Even if it is accidental or for just a short period of time, leaving a child in a vehicle can have serious consequences. If the child is left buckled in the car a 3 step-alarm will be triggered.

⚠ Your child is left alone in the car!
Swipe to unlock

1. Phone notification

2. Alarm sounds

3. SMS with GPS position of the seat is sent to emergency contacts

Each step can be dismissed by tapping the notification/alarm or returning to the child.

Safety that never stops

Holmbergs® DigitalSafety™

eSaga Connect™ details

The eSaga Connect™ uses Bluetooth communication to send buckle status to the app.

Powered by a standard button cell battery with a lifetime of minimum 1 year depending on the outdoor temperature and frequency of use. The battery can easily be changed by consumer.

App details

The app works in the background of the phone.

Phone notification can be turned off in the app settings.

Possibility to communicate directly to selected end users.

Connection to car dashboard (coming soon).

Add your logotype, colors, userguides and more.

Holmbergs maintenace team keeps your app secure and always up to date.

The app supports iOS and Android phone models.
